TEAM INTEGY ALIGNMENT SETUP STATION 2

Like all modern race cars, touring cars are loaded with tuning options. If you take the time to dial in your car using adjustments such as caster, camber, track width and toe, you'll have a real advantage over the competition. The key is not only to use these options but also to use them accurately. That's where setup boards come in. Team Integy's Team Alignment Setup Station 2 includes everything you need to dial in your race car like a pro, and it costs about \$130. Let's check it out.

The Setup Station 2 comes in a professional-looking black plastic carrying case and includes the following pieces: 13.25x6.75-inch setup board with a bubble level and adjustable support legs, two setup wheels, clear plastic toe-angle ruler, four wheel nuts and two combination caster and camber-change gauges. That sounds like a lot, and it is. No worries, though—everything is very easy to set up and use. The Setup Station 2 is available in six colors: silver, blue, purple, red, chrome and gunmetal. The included wheel nuts thread onto standard axes, and metric axle nuts (C22305M) are optional. The individual pieces are anodized aluminum, and the setup board features a replaceable cover.

The Setup Station 2 comes with instructions, so I won't repeat them here. What you need to know is that it's a lot easier than fumbling around with four or five different tools. All the pieces are of high quality in terms of fit and finish. I've used the Setup Station 2 for a few months now, and I haven't experienced any problems or noticed any flaws. It works well and looks good. This system allows you to accurately measure: toe,

track width, camber, camber change and caster.

It's like having your own alignment shop for your RC car. This

model is designed for nitro and electric touring cars, but Integy offers systems for other types of vehicle.

THE VERDICT

Like most RC racers, I've always wanted a setup station, and I'm very happy to have the Team Integy Alignment Setup Station 2. I now head to the track with confidence knowing that my car is set up accurately. —Matt Higgins

Team Integy Setup Station 2—item no. varies; \$130

RATING 4.5 ●●●●●

Left: the Setup Station comes with a ruled cover, and replacements are available. Above: the open setup wheels allow easy access to pivot balls. Right: the gauge measures caster and camber gain.
